REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The applicant teaches an invention that utilizes the superposition method. The term superposition has various definitions in the display art, however in the context of the claims and the application, the superposition method is specifically defined. The superposition method is defined in the description of the prior art section, specifically paragraph 7 of the application.

Superposition: "In the super position method, at least one group of two subframes having the same luminance weight is provided... the cells in the display screen are classified into Group A and Group B. In the gradations in which one of the two subframes having the same weight is lighted, one subframe of the Weight is lighted for cells of group A, while the other subframe is lighted for cells of the Group B."

In light of this specific definition of the term "superposition method", the examiner believes the invention is unique and allowable. The idea of applying the superposition method to only "specific areas of the frame" is an idea that is absent from prior art references.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
